

Position: Operations Technician – Dissection

Location: Leeds, UK

POSITION SUMMARY:

The **Operations Technician – Dissection** is responsible for supporting production activities for supply of medical devices for Tissue Regenix Ltd and its UK subsidiaries.

Hours: 37.5 hours per week (onsite)

Salary: Up to £25,000

Benefits: Pension, private healthcare, death in service benefit

ESSENTIAL FUNCTIONS: *(Not an exhaustive list)*

Performance of tissue dissection and general activities associated with the supply of medical devices at the Tissue Regenix UK facility, including:

- Perform production activities to support successful delivery of the production schedule. Activities include tissue (porcine tendon) dissection, pre-treatment, incoming inspection of materials and equipment & area cleaning.
- Support in liaising with tissue suppliers as required.
- Support maintenance of stock inventories to minimum levels to ensure routine operation of production areas. Conduct purchasing activities and ordering of materials as required.
- Maintain operational areas in line with applicable procedures.
- Conduct all activities in compliance with any applicable health & safety requirements and internal policies and procedures.
- Support investigation and resolution of operational issues owned by production (corrective and preventive actions, nonconformances, nonconforming products etc.).
- Support effective implementation of operational changes owned by production (process changes, improvements etc).
- Support execution of equipment maintenance and calibration schedule for all production equipment, including liaising with external parties as required.
- Support identification and implementation of projects to improve costs and/or efficiencies within the operation.
- Support maintenance of production documentation and records, including updating documentation as required.

KNOWLEDGE, SKILLS, & ABILITIES:

- Must have experience working in a laboratory environment.
- Must have a minimum of 2 years' industry experience, ideally within the medical device or other regulated industry.
- Must have experience working within an ISO 13485 quality management system or equivalent and/or experience of manufacturing best practices, e.g. good

manufacturing practice (GMP), good laboratory practice (GLP), good documentation practice etc.

- Must have excellent verbal & written communication skills.
- Must have good working computer skills including MS Word and Excel.
- Must be organised and self-motivated.
- Must be able to plan & prioritise their own workload
- Must have a flexible and hands-on attitude to all aspects of work.
- Must have a high level of accuracy, diligence & attention to detail.
- Must be able to work well as part of a team as well as individually.
- Experience of manufacturing processes for medical devices, especially biologics, would be beneficial.
